

Virtualbox / Hyper-V / WLS2

VM from Virtual Box stopped working (see <https://github.com/kubernetes/minikube/issues/4587>)

Execute a PowerShell as Administrator and then:

```
bcdedit /set hypervisorlaunchtype off
```

Reboot your machine

Now Virtual Box works, but WLS2 won't... so if you want it back working:

```
bcdedit /set hypervisorlaunchtype Auto
```

And reboot again...
